

Quo. – Privacy Policy

Effective date: September 19, 2026

Quo. is a daily quote app. Your privacy is simple with us: your quotes stay on your device, and the only thing we ever learn is anonymous, aggregate usage — never who you are or what you wrote.

Your Quotes

All quotes you add are stored **locally on your device only**. They are shared with the Quo. widget on the same device via Apple's App Group storage. They are never sent to us or to anyone else. Deleting the app deletes all of it.

The one exception is when **you** choose to share a quote: tapping Share hands that quote to the app you pick in the iOS share sheet. Nothing is shared unless you tap it.

Anonymous Usage Statistics

To understand whether Quo. is useful, the app sends anonymous usage statistics to TelemetryDeck, a privacy-focused analytics service based in Germany, with its servers in the EU.

What is sent:

- That the app was opened, and simple counters kept on your device: how many times it has been opened, on how many different days, how many days since it was installed, and how many quotes are in your library (the number only)
- That onboarding was finished, that a quote was added, that a quote was shared, or that a rating request was shown — the event only, never the content
- The app version, and your device's platform and iOS version

What is **never** sent: the text of your quotes, author names, your name, e-mail address, contacts, location, advertising identifier, or anything you type.

How you stay anonymous: the statistics are tied to a random identifier that is created on your device, is not connected to your Apple ID or any account, and is hashed before it leaves your device. TelemetryDeck hashes it again on arrival, and states that it never stores IP addresses. The data cannot be used to identify you, is not linked to your identity, and is not used to track you across apps or websites.

What Quo. Does Not Do

- No accounts or sign-ups
- No advertising
- No selling or sharing of data with advertisers or data brokers
- No tracking across other apps or websites
